COVID AND THE CLASH OF IDEOLOGIES
bit.ly/PANDA-truthaboutlockdowns
A **deadly novel virus** is sweeping the planet. It’s spread by **droplets and fomites**. Nobody is immune and there is no treatment. Asymptomatic people are major drivers of disease. PCR tests diagnose COVID. So we have to **lock down** and wear **masks** until everyone is **vaccinated**. **Variants** will haunt us forever. **Long COVID** and **reinfections** are of concern. Those who challenges this narrative are a **danger**.
A virus that presents high risk to few and negligible risk to most hit some regions. It's airborne, spreads by minute particles. Few are susceptible to severe disease. There are several available treatments. Asymptomatics are not major drivers of disease. Lockdowns and mask mandates, never recommended before, were tried. They haven’t worked and caused great harm. Variants are not of concern. PCR test doesn’t diagnose. Immunity is long lasting. The vulnerable were hurt instead of helped.
FACED WITH FEAR, DO WE CHOOSE FIGHT OR FLIGHT?
If you're an antivaxxer and/or Covid denialist, you are either 1. extremely gullible & averse to science 2. utterly uninformed 3. a right wing conspiracy fanatic 4. crying out for help & attention or 5. all of the above. (Or just not very bright?)

Hi Tony,

Thanks for sharing. Yes, I saw this earlier today and both Eddie and myself are actually quoted in it. It’s a great article, but the problem is that our phylogenetic analyses aren’t able to answer whether the sequences are unusual at individual residues, except if they are completely off. On a phylogenetic tree the virus looks totally normal and the close clustering with bats suggest that bats serve as the reservoir. The unusual features of the virus make up a really small part of the genome (<0.1%) so one has to look really closely at all the sequences to see that some of the features (potentially) look engineered.
Former CDC chief says "most likely" cause of coronavirus is that it "escaped" from a lab

Dr. Robert Redfield, the former director of the Centers for Disease Control and Prevention, told CNN he believes the coronavirus originally escaped from a lab. But it's too early to know for sure and investigations are ongoing.

Redfield stressed he was not implying "intentional release" or "accidental release."
The virus can also spread in poorly ventilated and/or crowded indoor settings, where people tend to spend longer periods of time. This is because aerosols remain suspended in the air or travel farther than 1 metre (long-range).

The smallest very fine droplets, and aerosol particles formed when these fine droplets rapidly dry, are small enough that they can remain suspended in the air for minutes to hours.
TRANSMISSION “CONSPIRACY THEORIES” PROVEN TRUE

FOMITE: Droplets Spread on Surfaces
DROPLETS: Larger Particles Affected by Gravity
AEROSOL: Smaller Particles Dispersed by Air
Roadmap to improve and ensure good indoor ventilation in the context of COVID-19

1 March 2021 | COVID-19: Infection prevention and control / WASH
‘A welcome step’: WHO acknowledges aerosol spread of COVID-19

But experts say the Australian Government’s infection control group must now update its advice to ensure new strategies to reduce transmission risks.
WHY?
PSYOPS TO CREATE FEAR
A deadly novel virus
Transmission by droplets and fomites
Asymptomatic transmission
Nobody is immune
Lack of treatment
Scariant variants
Long COVID
Reinfection after recovery
TOOLS TO SUSTAIN AN AMBIENCE OF FEAR

- temperature checks
- marks on the floor
- glass separators
- masks on every face
- 2 m distancing
- curfews
- push for testing
- oversanitization
- fumigation
- videos of people dropping to the floor
[PEOPLE WITH MASKS] ARE WALKING BILLBOARDS FOR THE EPIDEMIC

**Watching Eyes Effect**
People are more likely to comply when they feel they are being watched.

**Identifiable Victim Effect**
People are influenced more by a singular, named victim than by groups or statistics.

**Fear**
Emotion is needed to motivate behaviour, and fear is probably the strongest emotion.

**Messenger**
People are more likely to comply with a message from a liked or trusted source.

**Accountability**
People will diffuse responsibility to others unless they know their specific role.

**Efficacy**
Fear messaging only works if people have a clear, achievable action to take.

Unmasking Kills
A classified paper, which presented the danger posed by the virus as dramatically as possible, and which quickly spread through the media.

Ignored the Robert Koch Institute estimate of fatality rate, itself already a 4x overestimate, and assumed double in order to get to a statement that a million people would die without intervention.

SPI-B warned in March last year that ministers needed to increase “the perceived level of personal threat” from Covid-19 because “a substantial number of people still do not feel sufficiently personally threatened”.

Gavin Morgan, a psychologist on the team, said: “Clearly, using fear as a means of control is not ethical. Using fear smacks of totalitarianism. It’s not an ethical stance for any modern government. By nature I am an optimistic person, but all this has given me a more pessimistic view of people.”

“Masks do more harm than good & the decision to mandate them for healthy people was introduced as a psychological control method.”

“Children are unlikely to suffer from the epidemic”: Wrong. Children are easily infected, even with exit restrictions, e.g. from the neighbours’ children. When they infect their parents and one of them dies in agony at home and they feel they are to blame for forgetting to wash their hands after playing, for example, it is the most terrible thing a child will ever experience.”
‘The nudge unit’: Ottawa’s behavioural-science team investigates how Canadians feel about vaccines, public health and who to trust

“A massive social science experiment that has taken place over the planet has given government important clues on how to modify citizen’s behaviour for other big global issues—such as climate change”
ISAG members were instructed to “review and internalise” instructions to “look for ways to increase insecurity, anxiety, and uncertainty”, and to “go after people and not institutions” because “people hurt faster than institutions.”

Members, many of whom are regular guests in Irish media, were told that they could count on “imagination” to “dream up many more consequences” than they themselves as “the threat is usually more terrifying than the thing itself.”

because they convey a message of ‘solidarity’. In other words, there is a behavioural science ‘reason’ for wearing masks, to increase a sense of collectivism. This is a feeling favoured by the psychologists that is entirely unrelated to the scientific evidence regarding transmission. Essentially, they want us to feel like we are ‘in it together’.

HISTORY REPEATING ITSELF

Reconstruction of a Mass Hysteria

The Swine Flu Panic of 2009

Swine flu kept the world in suspense for almost a year. A massive vaccination campaign was mounted to put a stop to the anticipated pandemic. But, as it turned out, it was a relatively harmless strain of the flu virus. How, and why, did the world overreact? A reconstruction. By SPIEGEL staff.

Fact check: Coronavirus not man-made or engineered but its origin remains unclear

And there's scientific consensus that SARS-CoV-2, or COVID-19, is not man-made. More than two dozen public health experts issued a statement to The Lancet in February to "strongly condemn conspiracy theories suggesting that COVID-19 does not have a natural origin."

They continued: "Scientists from multiple countries have published and analysed genomes of the causative agent, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), and they overwhelmingly conclude that this coronavirus originated in wildlife, as have so many other emerging pathogens."

And an article published in Nature Medicine in March found that the genetic makeup of the virus that causes COVID-19 indicates that it has not been altered by humans. "We do not believe that any type of laboratory-based scenario is plausible," its authors wrote, instead concluding that the virus likely originated from bats, like SARS-CoV.

"The groups we studied believe that science is a process, and not an institution."
"anti-maskers value unmediated access to information and privilege personal research ...over “expert interpretations”, ..., individual initiative and ingenuity, trusting scientific analysis only insofar as they can replicate it themselves by accessing and manipulating the data firsthand."
"They are highly reflexive about the inherently biased nature of any analysis, and resent what they view as the arrogant self-righteousness of scientific elites."
"We argue that anti-maskers’ deep story draws from similar wells of resentment, but adds a particular emphasis on the usurpation of scientific knowledge by a paternalistic, condescending elite that expects intellectual subservience rather than critical thinking from the public."
And yet in the conclusion they lament the skeptical impulse that the 'science simply isn’t settled,' prompting people to simply 'think for themselves' to horrifying ends.

Peter Doshi: Pfizer and Moderna’s “95% effective” vaccines—we need more details and the raw data

January 4, 2021

On 5 February 2021 we published a clarification to this piece. It is available here.

Five weeks ago, when I raised questions about the results of Pfizer’s and Moderna’s covid-19 vaccine trials, all that was in the public domain were the study protocols and a few press releases. Today, two journal publications and around 400 pages of summary data are available in the form of multiple reports presented by and to the FDA prior to the agency’s emergency authorization of each company’s mRNA vaccine. While some of the additional details are reassuring, some are not. Here I outline new concerns about the trustworthiness and meaningfulness of the reported efficacy results.
Bill Gates says the world will need 7 billion vaccine doses to end COVID-19 pandemic

BY ALAN BOYLE on April 30, 2020 at 12:00 pm
What is herd immunity?

Herd immunity is the indirect protection from an infectious disease that happens when a population is immune either through vaccination or immunity developed through previous infection. This means that even people who haven't been infected, or in whom an infection hasn't triggered an immune response, they are protected because people around them who are immune can act as buffers between them and an infected person. The threshold for establishing herd immunity for COVID-19 is not yet clear.

‘Herd immunity’, also known as 'population immunity', is a concept used for vaccination, in which a population can be protected from a certain virus if a threshold of vaccination is reached.

Herd immunity is achieved by protecting people from a virus, not by exposing them to it. Read the Director-General's 12 October media briefing speech for more detail.

WHAT IS TOTALITARIANISM?

Alarmism
Keep the entire population in a state of fear so they will conform and submit

Safety
Focus on national security (safety) in direct opposition to individual freedoms

Conditional
Paint a picture of “hell” and promise salvation only via the desired behaviour

Totality
Demand compliance from the entire population, with no exceptions

Perpetuity
Set up impossible or intangible goals to justify regime indefinitely
EARLY TREATMENT SAVES LIVES

OUR EARLY AMBULATORY TREATMENT REGIMEN WAS ASSOCIATED WITH ESTIMATED 87.6% AND 74.9% REDUCTIONS IN HOSPITALIZATION AND DEATH RESPECTIVELY.
